

History has called us into action

Japan with a history of aggression, crimes against Humanity, with NO signs of remorse, is not worthy of becoming a permanent member on the UN Security Council. Just a click, you can review and send the letter to

[U.N. Secretary General](#)

Unit 731, 100 - Inhuman WMD Biological Warfare

This WMD Biological Warfare is definitely the worst crime case of systematic biological massacre against Humanity committed by a country in our Human History.

"The fellow knew that it was over for him, and so he didn't struggle." recalled the old former medical assistant of a Japanese Army unit in China in World War II, "But when I picked up the scalpel that's when he began screaming. **I cut him open from the chest to the stomach, and he screamed terribly, and his face was all twisted in agony.** He made this unimaginable sound, he was screaming so horribly. But then finally he stopped." The former medical assistant who insisted on anonymity, explained the reason for the vivisection. The Chinese prisoner had been deliberately infected with the plague as part of a research project.

Imperial Japan's biological killing fields are a lost chapter of history that the full horror of which is only recently been exposed and understood in all its enormity.

Japan set up Headquarters of Unit 731 in Ping Fan near Harbin and Unit 100 in ChangChun, and Mukden, now called SunYang, in China to develop plague bombs for use in WWII. The base was disguised as Epidemic Prevention and Water Supply Unit. The complex in Ping Fan was completed in 1939, contained more than 150 buildings, including 2 secret prisons and 3 crematoria, and was the largest WMD Biological Weapon research center in the world.

After infecting him, the researchers decided to **cut him open alive, tear him apart, organ by organ,** to see what the disease does to a man's inside. Often no anesthetic was used, he said, out of concern that it might have an effect on the results.

From July 1993 to Dec. 1994, the "**Unit 731 Exhibition**" toured Japan and presented at 61 locations over the course of one and half year. It had sent shockwaves throughout Japan. Hal Gold had collected many testimonies in his book "[Unit 731: Testimony; Japan's Wartime Human Experimentation and the Post-War Cover-Up](#)". One of the testimonies was provided by an aged former Japanese doctor Kurumizawa Masakuni :

The Chinese woman victim had regained her consciousness while being vivisected alive.

" She opened her eyes. "

" And then ? "

" She hollered. "

" What did she say ? "

Kurumizawa could not answer, then began weeping feebly and murmured,
 " I don't want to think about it again. "
 The interviewee apologized, waited a few seconds, and tried again for an answer.
 He gave it though sobs.
 " She said, "**It's all right to kill me, but please spare my child's life.**"

Japanese Dr. Kanisawa testified in NBC Dateline "**Factory of Death: Unit 731**" in Aug. 15, 1995, the **live un-anesthetized dissection was a routine common practice in all units.**

"The 1st time, I was very hesitant to do what I was told to do.
 The 2nd time, you get used to it.
 The 3rd time, you more or less volunteered."

Yoshio Shinozuka, a former member of Unit 731 said "The first time, **my legs were shaking so badly I could hardly stand up**". He knew the person on the operating table, "**At the vivisection, I could not meet his eyes because of the hate he had in his glare at me.**"

"**We called the victims 'logs'**," he said, "**We didn't want to think of them as people. We didn't want to admit that we were taking lives.** So we convinced ourselves that what we were doing was like cutting down a tree. When you see someone in that state, you just can't move. Your mind goes blank. The fear is overwhelming." said Yoshio.

The research program was one of the great secrets of Japan during and after World War II : a vast project to develop weapons of **WMD Biological Warfare including following deadly diseases :**

Bubonic Plague	Anthrax (including inhalation, skin and gastrointestinal types)
Smallpox	Typhoid
Paratyphoid A and B	Tularemia
Cholera	Epidemic Hemorrhagic Fever
Syphilis	Aerosols
Botulism	Brucellosis
Dysentery	Tetanus
Glanders	Tuberculosis
Yellow fever	Typhus
Tularemia	Gas Gangrene
Scarlet Sever	Songo
Diphtheria	Brysipelas
Selmonella	Venereal Diseases
Infectious Jaundice	Undulant Fever
Epidemic Cerebrospinal Meningitis	Tick Encephalitis
Plant diseases for crop destruction	Dozen other pathogens

Unit 731 & Unit 100 were comprised of over 3,000 researchers and technicians. It was a gigantic research center focused on WMD Biological Weapons - the **world's most technically advanced at the time, used human as the guinea pigs**, known as marutas (logs). The Japanese told the locals that the facilities were lumber mills.

The Ping Fan facility alone could monthly "manufacture as much as 300 kg of plague bacteria... 500-600 kg of anthrax germs, 800-900 kg typhoid, paratyphoid, or dysentery germs, or as much as 1000 kg of cholera germs." If several different diseases were manufactured simultaneously, then the total production of pathogens could be many times higher.

A former member of Unit 731 testified that "to eliminate any chance of leaking out the secret of construction of the 'Square Buildings' by the laborers, they are all sent to special prison and used as the first batch of test objects."
